

(1) * Capacitors in Cutoff operating region:

$$Q = C \cdot V$$

① parallel-plate : $C = \frac{\epsilon_0 \epsilon_r A}{d}$

ϵ_0 : permittivity of air $8.854 \times 10^{-12} \left[\frac{F}{m} \right]$

ϵ_r : relative permittivity of SiO_2

$$3.9 < \epsilon_r < 4.2$$

d : oxide thickness (t_{ox})

oxide capacitance per unit area :

$$C_{ox} = \frac{\epsilon_0 \epsilon_r}{t_{ox}} \left[\frac{F}{m^2} \right]$$

$$C_{gse} = C_{gde} = C_{ox} \cdot W \cdot L_{ov}$$

$$C_{gb} = C_{ox} \cdot W \cdot L_{eff}$$

② bottom-plate junction capacitance

$$C_j = \frac{C_{j0}}{\left(1 + \frac{V_r}{\Phi_0}\right)^n} \left[\frac{F}{m^2} \right]$$

junction capacitance at biasing voltage

junction built-in voltage

$$C_{js} = C_j \cdot L_j \cdot W = C_j A_s$$

$$C_{jd} = C_j \cdot L_j \cdot W = C_j A_d$$

③ sidewall junction capacitor

$$C_{jsw} = \frac{C_{jsw0}}{\left(1 + \frac{V_r}{\Phi_0}\right)^n} \left[\frac{F}{m} \right]$$

$$C_{jsw-s} = 2(L_j + W) C_{jsw}$$

$$C_{jsw-d} = 2(L_j + W) C_{jsw}$$

P_s : source Periphery, P_d : drain periphery

overlap length

$$L_{ov} \ll L$$

$$L_{eff} = L - 2L_{ov}$$

layout view

(2) Capacitors in triode operating region:

in triode channel is symmetrical because $V_d \approx V_s$

Extrinsic
Intrinsic

$$C_{gse} = C_{gde} = C_{ox} \cdot L_{ov} \cdot W$$

$$C_{gsi} = C_{gdi} = C_{ox} \cdot \frac{L_{eff}}{2} \cdot W, (L_{eff} \approx L)$$

gate-channel capacitor = $C_{gsi} + C_{gdi}$

* total source bottom-plate junction cap:

$$C_{js} = C_{j0} \cdot L_j \cdot W + \underbrace{C_{j0} \cdot \left(\frac{L_{eff}}{2} \cdot W \right)}_{\text{intrinsic}} = C_{jd}$$

* total source side-wall junction capacitor:

$$C_{jsw-s} = C_{jsw} \cdot (2L_j + W) = C_{jswd}$$

(3) * Capacitors in active (saturation) operating points :

$$\begin{cases} C_{gsi} = \frac{2}{3} C_{ox} L_{eff} \cdot W \\ C_{gdi} = \frac{1}{3} C_{ox} L_{eff} \cdot W \end{cases}$$

$$\begin{cases} C_{jsi} = \frac{2}{3} C_j \cdot L_{eff} \cdot W \\ C_{jdi} = \frac{1}{3} C_j \cdot L_{eff} \cdot W \end{cases}$$

$$L_{eff} \approx L$$

* Capacitors in Cutoff operating region:

$$V_{GS} < V_{th}$$
